

Emails Not Received From a Particular Domain or Sender

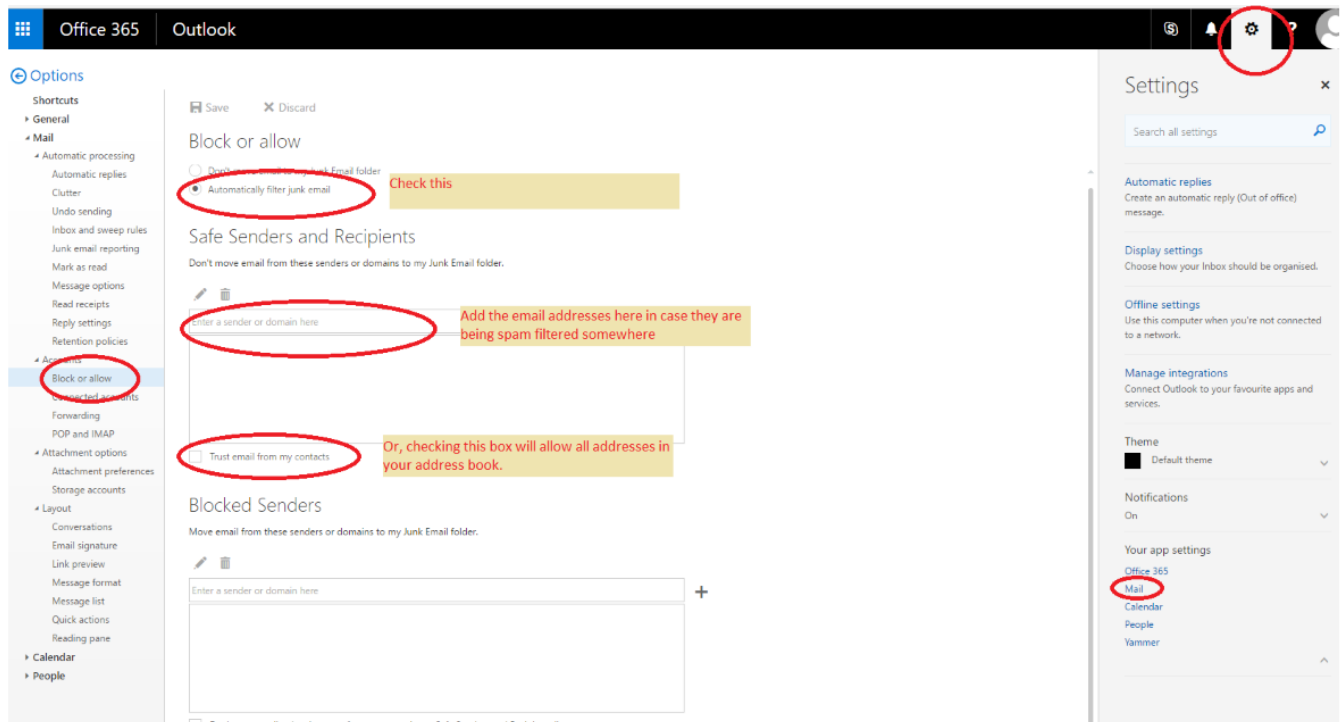

Article Number: 144 | Rating: Unrated | Last Updated: Wed, Jun 28, 2017 at 3:54 PM

This article relates to the non-receipt of emails, particularly relates to Outlook email accounts, especially Office 365 online, where there is no router involved so the filtering is probably due to settings.

1. Log into the 365 account online;
2. Go to *Settings* (top-right);
3. Check the rules for anything that could cause the problem e.g. a rule grabbing keywords could be to blame: *Mail>Automatic Processing>Inbox and sweep rules*;
4. Check the senders are not in the *Blocked Senders* list;
5. The most likely check is in *Mail>Accounts>Block or allow* - check the *Automatically filter junk mail* box;
6. Enter the problem email addresses in the *Safe Senders and Recipients*, and/or...
7. Check the *Trust email from my contacts* box if they are in the contacts list.

Additionally, see [this page](#) for more ideas if necessary.
