

Emails Not Received From a Particular Domain or Sender

Article Number: 144 | Rating: Unrated | Last Updated: Wed, Jun 28, 2017 at 3:54 PM

This article relates to the non-receipt of emails, particularly relates to Outlook email accounts, especially Office 365 online, where there is no router involved so the filtering is probably due to settings.

1. Log into the 365 account online;
2. Go to *Settings* (top-right);
3. Check the rules for anything that could cause the problem e.g. a rule grabbing keywords could be to blame: *Mail>Automatic Processing>Inbox and sweep rules*;
4. Check the senders are not in the *Blocked Senders* list;
5. The most likely check is in *Mail>Accounts>Block or allow* - check the *Automatically filter junk mail* box;
6. Enter the problem email addresses in the *Safe Senders and Recipients*, and/or...
7. Check the *Trust email from my contacts* box if they are in the contacts list.

Additionally, see [this page](#) for more ideas if necessary.

The image shows a screenshot of the Outlook interface. At the top, the 'Office 365 Outlook' title bar is visible. On the left, the 'Options' pane is open, with 'Block or allow' selected under the 'Mail' section. The main area displays the 'Block or allow' settings, including 'Block or allow' (selected), 'Safe Senders and Recipients', and 'Blocked Senders'. Annotations with red circles and yellow boxes highlight specific settings: 'Automatically filter junk email' is circled and labeled 'Check this'; the 'Enter a sender or domain here' input field is circled and labeled 'Add the email addresses here in case they are being spam filtered somewhere'; and the 'Trust email from my contacts' checkbox is circled and labeled 'Or, checking this box will allow all addresses in your address book.'. On the right, the 'Settings' pane is open, with 'Mail' circled in red under the 'Your app settings' section.
