

Remote Desktop Connection Fails to Load

Article Number: 161 | Rating: Unrated | Last Updated: Mon, Jul 3, 2017 at 4:48 PM

Running a Windows Remote Desktop connection produces the error: *The remote session was disconnected because the Remote Desktop client access license stored on this computer has been modified.*

This is probably because it needs to be *Run as Administrator*, which is not generally available for this feature.

Right-click the icon or file and select *Open with>Notepad*. Scroll to the end and add the line *administrative session:i:1*
