about us

m.e.s.h. was created by [Stickman Technology](#), an IT company with many years of experience of supplying IT, network and connectivity solutions to the service office and managed workspace sector and their occupiers alike.

Stickman's specialist understanding of this niche industry, and the needs of both clients and building management enabled the development and creation the m.e.s.h. product. As a joint venture with a leading enterprise centre provider, the system was designed in consultation with centre managers, board level management and occupiers to ensure the product is valuable at all levels.

m.e.s.h. is now installed in over 130 sites across the UK (business centres, science parks, conference facilities and even hotels), and the userbase is increasing all the time. This means that tens of thousands of end users receive their connectivity daily using the unique m.e.s.h. technology.
