How to Find a PC's Name ... and other PC Properties

The name of your PC isn't always obvious, there can be a number of labels around that could be taken to be the computer's name, but which is the right one? To find a PC's name:

1. Open *File Explorer* by pressing *Win+E*;
2. Right-click *This PC*;
3. Select *Properties*;
4. The computer name is roughly in the middle of the next window.

This method can also be used to confirm the Windows version, type of CPU, amount of RAM and whether it is a 32- or 64-bit system.
